

## Práctica 5 PPS Antón Cernadas Cordido

### Ejercicio 1:

1. Clono el repositorio de github que creé para el proyecto:

A terminal window titled 'administrador@eqXX: ~/pps\_devsecops/ejercicio1' showing the execution of a git clone command. The output indicates the repository was cloned successfully, with a warning about missing content. Subsequent 'ls' and 'cd' commands are shown.

```
administrador@eqXX:~$ git clone https://github.com/antonechete/pps_devsecops.git
Clonando en 'pps_devsecops'...
warning: Parece haber clonado un repositorio sin contenido.
administrador@eqXX:~$
administrador@eqXX:~$ ls
Descargas  Escritorio  Música      pps_devsecops  Público  Videos
Documentos Imágenes    Plantillas  proxy.sh       snap
administrador@eqXX:~$ cd pps_devsecops/
administrador@eqXX:~/pps_devsecops$
```

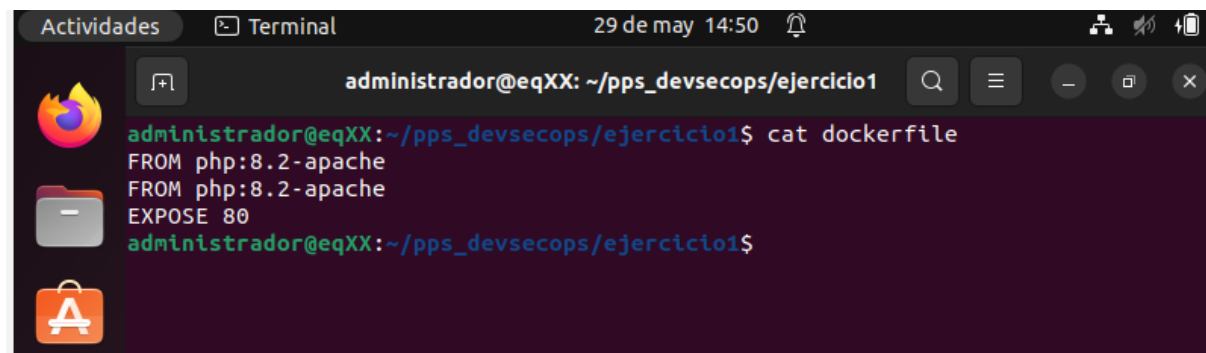

2. Creo un archivo php sencillo:

A terminal window titled 'administrador@eqXX: ~/pps\_devsecops/ejercicio1' showing the creation of an index.php file using the 'cat' command. The file content includes a PHP header, an echo statement for a greeting, another echo for the server time, and a phpinfo() call.

```
administrador@eqXX:~/pps_devsecops/ejercicio1$ cat index.php
<?php
echo "<h1>Hola desde mi contenedor seguro de Docker!</h1>";
echo "<p>Hora del servidor: " . date('Y-m-d H:i:s') . "</p>";
phpinfo(); // Esto queda muy profesional para la captura de pantalla
?>
administrador@eqXX:~/pps_devsecops/ejercicio1$
```

3. Creo el dockerfile:

A terminal window titled 'administrador@eqXX: ~/pps\_devsecops/ejercicio1' showing the creation of a Dockerfile using the 'cat' command. The file content specifies the base image as php:8.2-apache and the exposed port as 80.

```
administrador@eqXX:~/pps_devsecops/ejercicio1$ cat dockerfile
FROM php:8.2-apache
FROM php:8.2-apache
EXPOSE 80
administrador@eqXX:~/pps_devsecops/ejercicio1$
```

#### 4. Hago el docker build

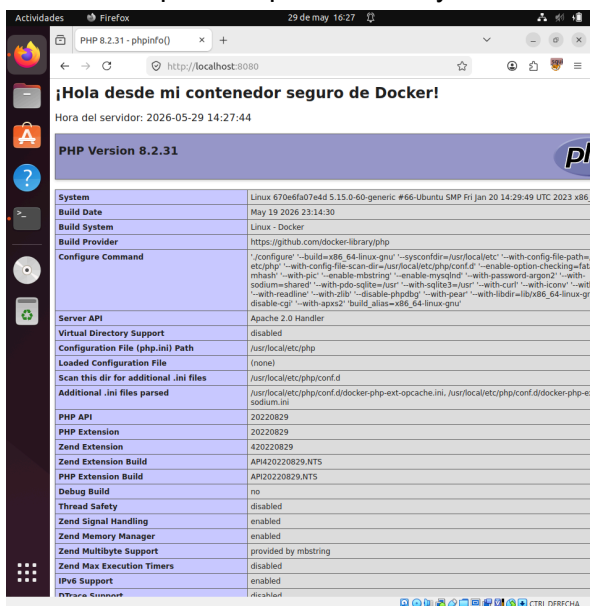

```
administrador@eqXX: ~/pps_devsecops/ejercicio1
administrador@eqXX:~/pps_devsecops/ejercicio1$ docker build -t anton-app:v1 .
[+] Building 5.5s (1/2)                                docker:default
=> [internal] load build definition from dockerfile    0.2s
=> => transferring dockerfile: 87B                    0.0s
=> [internal] load metadata for docker.io/library/php:8.2-apache 5.3s
```

#### 5. Hago el docker run:

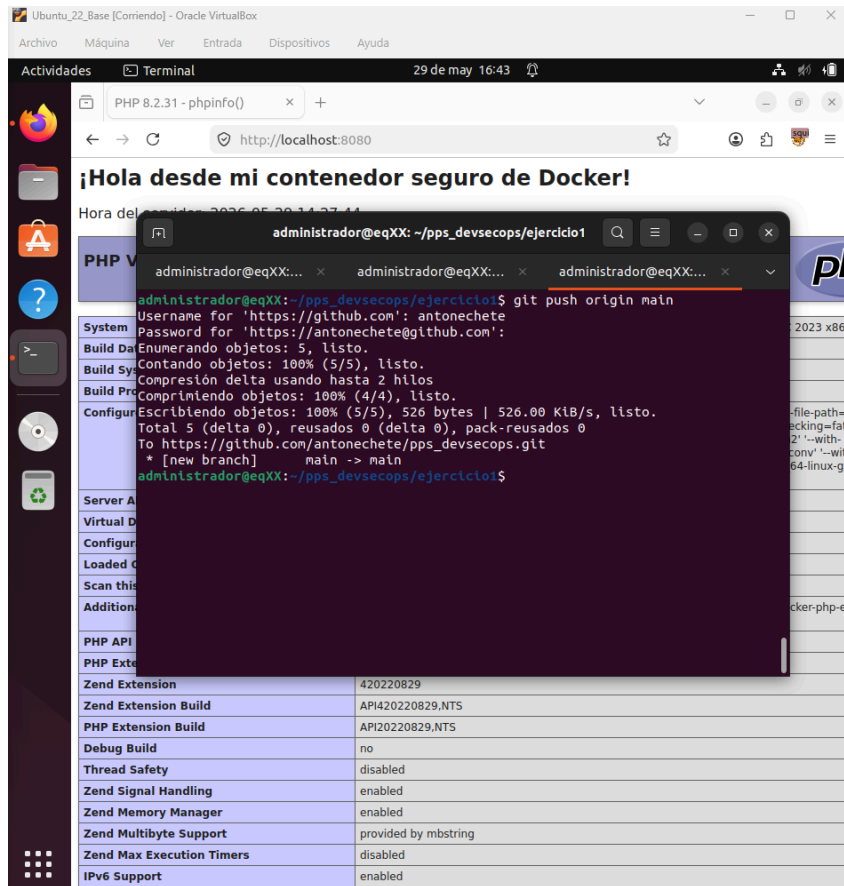

```
administrador@eqXX: ~/pps_devsecops/ejercicio1
administrador@eqXX:~/pps_devsecops/ejercicio1$ docker run -d -p 8080:80 --name anton-app:v1
Unable to find image 'anton-app:v1' locally
docker: Error response from daemon: pull access denied for anton-app, repository does not exist or may require 'docker login'

Run 'docker run --help' for more information
administrador@eqXX:~/pps_devsecops/ejercicio1$ docker run -d -p 8080:80 --name anton-app:v1
96100bd03d821fda839c1b493361501b02f4526ee3242e3a00a89a1eaa85a7d7
administrador@eqXX:~/pps_devsecops/ejercicio1$
```

#### 6. Compruebo que funciona y muestra la página:

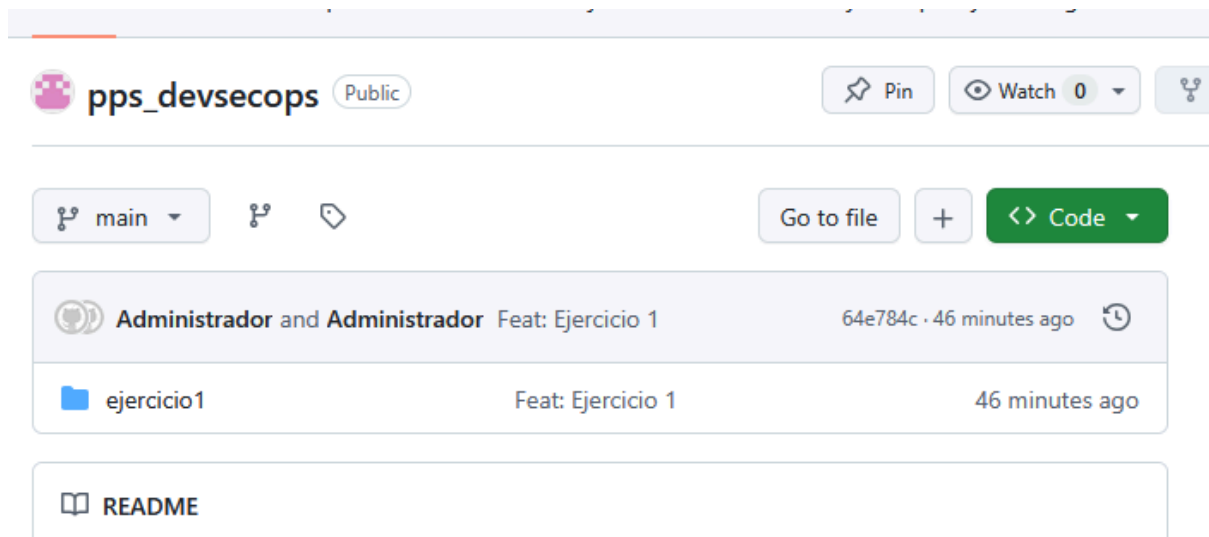

## 7. Realizo el git push:

```
administrador@eqXX: ~/pps_devsecops/ejercicio1
administrador@eqXX:~/pps_devsecops/ejercicio1$ git push origin main
Username for 'https://github.com': antonechete
Password for 'https://antonechete@github.com':

To https://github.com/antonechete/pps_devsecops.git
 * [new branch] main -> main
administrador@eqXX:~/pps_devsecops/ejercicio1$
```

## 8. Compruebo que aparece:

## Ejercicio 2:

### 1. Creo el dockerfile:

```
administrador@eqXX: ~/pps_devsecops/ejercicio2
administrador@eqXX: ~/pps_... x administrador@eqXX: ~/pps_... x administrador@eqXX: ~/pps_... x
administrador@eqXX:~/pps_devsecops/ejercicio2$ cat Dockerfile
FROM ubuntu:22.04
ENV DEBIAN_FRONTEND=noninteractive
RUN apt-get update && apt-get install -y \
    apache2 \
    php \
    libapache2-mod-php \
    curl \
    && rm -rf /var/lib/apt/lists/*

RUN rm -f /var/www/html/index.html && \
    curl -sSL https://github.com/antonechete/pps_devsecops/blob/main/ejercicio1/index.php -o /var/www/html/index.php

EXPOSE 80
CMD ["/usr/sbin/apache2ctl", "-D", "FOREGROUND"]
administrador@eqXX:~/pps_devsecops/ejercicio2$
```

### 2. Hago el docker build:

```
administrador@eqXX: ~/pps_devsecops/ejercicio2
administrador@eqXX:... x administrador@eqXX:... x administrador@eqXX:... x
administrador@eqXX:~/pps_devsecops/ejercicio2$ docker build -t anton-app:v2 .
[+] Building 1603.8s (7/7) FINISHED                                docker:default
=> [internal] load build definition from Dockerfile                0.0s
=> => transferring dockerfile: 532B                                0.0s
=> [internal] load metadata for docker.io/library/ubuntu:22.04    2.6s
=> [internal] load .dockerignore                                  0.0s
=> => transferring context: 2B                                       0.0s
=> CACHED [1/3] FROM docker.io/library/ubuntu:22.04@sha256:4f838adc7181d9039ac7 0.1s
=> => resolve docker.io/library/ubuntu:22.04@sha256:4f838adc7181d9039ac7 0.1s
=> [2/3] RUN apt-get update && apt-get install -y apache2 php      1580.2s
=> [3/3] RUN rm -f /var/www/html/index.html && curl -sSL https://raw 1.7s
=> exporting to image                                              18.7s
=> => exporting layers                                              14.3s
=> => exporting manifest sha256:57c60a6417a08bc88e7f51c58339d272f5817422 0.0s
=> => exporting config sha256:8dd3fef29611ad5632fa3925a8ec6631889cfd0911 0.0s
=> => exporting attestation manifest sha256:ca867f666ac41bfe48fe6f02f2de 0.1s
=> => exporting manifest list sha256:b59756a955fffd4284cf890ac43fbbbfdbf 0.0s
=> => naming to docker.io/library/anton-app:v2                     0.0s
=> => unpacking to docker.io/library/anton-app:v2                  4.1s
administrador@eqXX:~/pps_devsecops/ejercicio2$
```

### 3. Hago el docker run:

```
administrador@eqXX: ~/pps_devsecops/ejercicio2
administrador@eqXX: ~/pps_... x administrador@eqXX: ~/pps_... x administrador@eqXX: ~/pps_... x
administrador@eqXX:~/pps_devsecops/ejercicio2$ docker run -d -p 8081:80 --name contenedor-v2 anton-app:v2
2805a0e955e4341eced0e71bcf98d777a7f446ab56215612665048200fdcad75
administrador@eqXX:~/pps_devsecops/ejercicio2$
```

Tuve unos problemas, por lo que lo borré y lo volví a ejecutar:

```
Administrador@eqXX:~/pps_devsecops/ejercicio2$ docker stop contenedor-v2 2>/dev/null && docker r
Archivos dor-v2 2>/dev/null
docker build -t anton-app:v2 .
docker run -d -p 8081:80 --name contenedor-v2 anton-app:v2
contenedor-v2
contenedor-v2

```

### 4. Compruebo que funciona.

¡Hola desde mi contenedor seguro de Docker!

Hora del servidor: 2026-05-29 15:32:01

PHP Version 8.1.2-ubuntu2.24

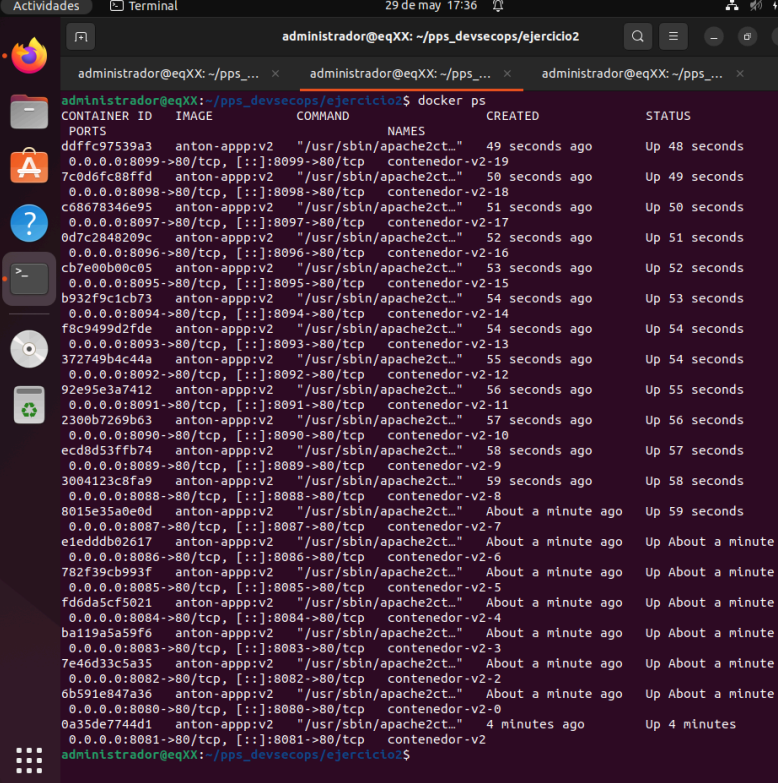

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| System                                  | Linux 0a35de7744d1 5.15.0-60-generic #66-Ubuntu SMP Fri Jan 20 14:29:49 UTC 2023 x86                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Build Date                              | May 25 2026 15:08:06                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Build System                            | Linux                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

9. Compruebo que se subió:

The screenshot shows a GitHub repository page for 'pps\_devsecops' by user 'antonechete'. The repository is public. The main branch is 'main'. The repository has two commits: 'ejercicio1' (Feat: Ejercicio 1, 1 hour ago) and 'ejercicio2' (Feat: Ejercicio 2, 3 minutes ago). The repository is currently empty, with a prompt to 'Add a README'. The right sidebar shows sections for 'About', 'Releases', 'Packages', and 'Contributors', all of which are currently empty.
